Cleaning recommendations:

1. **Before mating, always inspect** both connectors carefully.
2. **Avoid mating dirty connectors** as this can lead to cross-contamination and damage to the ferrule end face, causing scratches and pits.
3. **Inspect and clean both connectors** before mating to prevent permanent damage, reduce troubleshooting time, lower material costs, and improve signal quality.
4. To **make sure** fiber optic connector cleaning is a priority, develop inspection and cleaning procedures, and regularly inspect and clean your connectors.

By following these steps, you can ensure that your fiber optic connectors stay clean and **maintain optimal performance**.

Complete cleaning guide with instructions can be found [here](#).

2. Prevent residue cross contamination

3. Reduce lasting effects of contamination
